

REMARKS

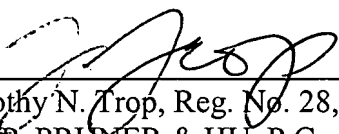

Claim 1 has been amended to include the subject matter of claim 2, which was not rejected over the prior art. Similar changes were made to other rejected claims.

With respect to the § 101 rejection, claim 1 has been amended to call for executing a single instruction multiple data floating point operation. This takes it out of the realm of a mathematical operation and instead places it in the form of a practical application. Therefore, reconsideration is respectfully requested.

The clear utility of such a situation is that functions such as sin and cos may be calculated in computers using single instruction multiple data floating point operations. Therefore, reconsideration is respectfully requested.

Respectfully submitted,

Date: August 6, 2007
